

Recharging Electric Vehicles

- Too many unclear charging solutions
- Multitude of service providers

Need for flexibility

- Choice of subscriptions, locations, providers, contracts
- Customized charging offerings
- Load balancing to optimize already overloaded electricity grid

Customized urban EV recharging

- Tailor-made charging offering for each vehicle (recharge duration, vehicle model, owner/driver profile, location, VaaS)
- Custom advertising and contracting

Intelligent EV charging infrastructure

- Using Artificial Intelligence, solar powered Internet of Things, Big Data, 4G/5G
- Addressing Smart Cities ambitions

Wide interest and potential

- Aimed at governments, smart cities, EV recharge station manufacturers, advertisers, energy providers, fleet owners
- Addressing energy efficiency of the electricity system, safety of the fleet of electric vehicles, decongestion of cities, environment, citizen convenience
